BrightPath Tech

Response to Request for Proposal

RFP-2026-017: Enterprise Vendor Management and Spend Analytics Platform (500 users, SAP S/4HANA + Oracle Fusion Finance + Okta SSO integration)

Submitted by: BrightPath Tech (fictional supplier for classroom use)
Validity of offer: 90 days from submission.

Company Profile

BrightPath Tech is a start-up founded in 2022 with 35 employees. It builds lightweight SaaS tools for small and mid-sized organisations and competes primarily on speed of delivery and low cost.

1. Executive Summary

BrightPath Tech offers the fastest and most affordable route to a vendor management platform. Our BrightVendor SaaS is simple, quick to roll out and priced to fit tight budgets. We can be live in 4 months.

We are a young company and focus on a lean delivery model.

2. Proposed Solution

BrightVendor is a multi-tenant SaaS application with standard dashboards for vendor records, contracts and spend. Integration with SAP is supported through scheduled CSV file import; a native API connector is planned for a later release. Oracle Fusion integration is to be defined with the customer. Single sign-on via SAML is available, OIDC is not yet supported.

The platform runs on a single cloud region. Capacity for 500 users is expected to be sufficient; formal load test results are not yet available.

3. Implementation Plan

Implementation takes 4 months in three phases: Setup (month 1), Configuration (months 2-3), Go-live (month 4). The team consists of 6 people including one project manager. Detailed milestones will be agreed after contract signature. Risk management is handled by the project manager on a best effort basis.

4. Price Table (3-year, USD)

Item	Year 1	Year 2	Year 3
Subscription (500 users)	190,000	190,000	190,000
Onboarding	60,000	-	-
Support	included	included	included
Total	250,000	190,000	190,000

Assumptions: data migration is excluded; custom integrations are excluded and quoted separately. Grand total: USD 630,000.

5. Security and Compliance

We follow industry-standard security practices and encrypt data at rest. ISO 27001 certification is in progress and expected next year. SOC 2 is not yet available. Details of audit logging are to be confirmed. We will comply with applicable privacy laws and can discuss a data processing agreement on request.

6. Support and Experience

Support is by email, 9am-5pm on weekdays, with a response by the next business day. The company was founded in 2022 and has completed 2 similar projects. One reference customer (a regional retailer) is available on request.
